Profile

Web developer who works inside marketing. Seven years of client websites, most recently custom WordPress, JavaScript and CSS at JKC Media, with performance, accessibility and technical SEO checked by measurement. Daily user of Claude Code. I like owning a site end to end and knowing what each change did.

Experience

Web Developer and Online Marketeer, JKC Media, Eindhoven Sep 2026 to now

- Built a 199-page destination system into a freight forwarder's custom WordPress theme: custom post type, ACF with a code default for every field, region hubs, 301s, and a hand-written JavaScript route checker over 195 countries. Live since 22 September 2026.
- Crawled all 266 URLs before launch. Over-long titles went from 132 to 9, 96 pages with duplicate FAQs got per-country FAQs, and all 199 pages carry FAQPage and Service schema. The new hero measured CLS 0.00 in a mobile Chrome trace.
- Maintain a WooCommerce shop in five languages: scripted ACF edits with a byte-level check on untouched blocks, a helper that rebuilds TranslatePress strings from existing human translations, must-use plugins for hero preload, lazy video and cache purging.
- Accessibility and speed fixes across client sites: alt text and contrast against WCAG AA (white on brand orange measured 3.06:1, proposed a 5.2:1 replacement), brand logos cut from up to 681 KB to 6 to 32 KB after finding PNGs hidden inside Figma SVG exports.
- Built the desk, the tool I run client work from: Python and plain JavaScript, about 41,000 lines, 986 unit tests, 28 scheduled jobs, pulling Productive, GA4, Search Console, Google Ads and Meta. Each logged change is measured again at 14, 28 and 56 days. Built with Claude Code.
- Built JKC Tours, a Manifest V3 Chrome extension that walks stakeholders through changes on the real page, with a headless check that fails when a marked element disappears. 119 tours so far.
- Work from marketing briefs daily and, since late October 2026, carry responsibility for all client marketing: technical SEO, conversion tracking with GTM and Consent Mode v2, and monthly AI search measurement in AI Overviews, ChatGPT and Perplexity.

Co-founder, Build Up Addis (web studio, remote) 2024 to now

- Sites for film, music and trade clients from brief to launch, on WordPress, Webflow and Shopify, with GA4 and on-page SEO. Automations in Make.com and n8n.

Co-founder and Content Lead, Digital Abyssinia Technologies 2019 to 2024

- Built and ran more than 20 client websites in WordPress and Elementor Pro for clients in film, music, law and healthcare.

Website and Digital Marketing, Barcon Getta, Ottawa (remote) 2021 to 2023

- Shopify design and maintenance, SEO, and conversion tracking through Google Tag Manager and HubSpot.

Projects

DutchMaster: Dutch learning app with AI chat, voice and a vocabulary trainer for the B1 exam. Next.js, TypeScript, Tailwind. **Recruitment pipeline:** Make.com scenario that scores CVs from Drive with an AI agent and logs to Sheets. **Housing finder:** Python watcher over about ten rental sites with Telegram alerts.

Skills

Front end: JavaScript, CSS, SCSS, HTML, TypeScript, React, Next.js, Tailwind. **Platforms:** WordPress (custom themes, ACF, must-use plugins), WooCommerce, Webflow, Shopify. **Quality:** Core Web Vitals, Chrome DevTools traces, WCAG, technical SEO, schema, multilingual sites, Playwright. **AI and automation:** Claude Code, Claude API, Make.com, n8n, Python. **Data:** GA4, Search Console, GTM. **Design and delivery:** Figma, Git.

Education and languages

MA Content & Media Strategy, NHL Stenden, 2026. BSc Software Engineering, Arba Minch University. Claude Code in Action (Anthropic, 2026), Google Analytics GA4 certification.

Amharic (native), English (fluent), Dutch (B1, lessons ongoing).
